Requirements Table

Student Club Event Ticketing & Budget Portal

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
FR-001	Functional	The system shall route event budget proposals through the required approval stages: Faculty Coordinator → Finance Office → Dean.	High	Pass: The request moves to the next stage only after the current approver digitally signs it. Fail: The request skips any approval stage.	This ensures that club budget requests follow the university's required approval process.	Verify that the approval sequence is enforced correctly.
FR-002	Functional	The system shall allow a Club Lead to submit an event proposal with the necessary event details for university	High	Pass: A proposal containing all required details is successfully submitted and receives a confirmation/status.	Event proposals are the starting point for organizing and processing club events.	Check which event details are mandatory .

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
		review.		Fail: The system accepts an incomplete proposal or does not record a valid submission.		
FR-003	Functional	The system shall allow a Club Lead to submit a budget request for a proposed event and track its approval status.	High	Pass: A budget request can be submitted for an event and its status is displayed as it moves through the approval process. Fail: The request cannot be submitted or its status is not updated.	Clubs need a clear way to request university funding and know where their request stands.	Statuses should clearly show the current approval stage.
FR-004	Functional	The system shall generate a secure QR-code ticket for	High	Pass: A valid ticket request produces a QR code associated with the	QR tickets provide a convenient way to manage event entry while	Verify that each generated ticket is associated with the correct

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
		an attendee after the ticket is successfully issued for an event.		correct event and attendee. Fail: No QR code is generated or the generated ticket is linked to incorrect information.	supporting secure ticketing.	event.
FR-005	Functional	The system shall allow venue staff to scan and validate an attendee's QR-code ticket before allowing entry to the event.	High	Pass: A valid QR ticket is accepted and an invalid ticket is rejected with an appropriate result. Fail: An invalid or unauthenticated ticket is accepted.	Ticket validation is necessary to control event entry and prevent unauthorized access.	Define the exact response shown for invalid tickets.
NFR-001	Nonfunctional – Performance & Security	The QR-code ticket scanner API shall validate the authenticity of a ticket in under 100 ms at	High	Pass: Benchmarking under simulated peak load confirms that ticket validation completes in less than 100	Fast validation prevents queues and keeps the entry process smooth during busy events.	Requirement provided in the problem statement.

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
		venue check-in points.		ms while maintaining the required security checks. Fail: Validation takes 100 ms or longer under the defined test conditions.		
NFR-002	Nonfunctional – Security	The system shall ensure that each issued QR-code ticket is uniquely associated with its intended event and attendee and cannot be accepted for a different event.	High	Pass: A ticket is accepted only for the event and attendee it was issued for. Fail: A ticket can be successfully used for another event or with mismatched ticket information.	This adds a basic security control so that QR tickets cannot be reused or incorrectly applied to another event.	Confirm the ticket identity rules during implementation.

Requirement Count

- **Functional Requirements:** 5 → FR-001 to FR-005
- **Non-Functional Requirements:** 2 → NFR-001 and NFR-002
- **Total Requirements:** 7
